This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

SALE OF GOVERNMENT PUBLICATIONS.

The under-mentioned Firms have been appointed sole Agents for the sale of Government Publications, including Parliamentary Reports and Papers, Acts of Parliament, Record Office Publications, &c., &c., and all such works can be purchased from them, either directly or through retail booksellers, who are entitled to a discount of 25 per cent. from the selling prices:—

IN ENGLAND:—

For all publications *except* the Hydrographical Works of the Admiralty and Patent Office Publications—Messrs. Eyre and Spottiswoode, East Harding Street, E.C.

For Hydrographical Works of the Admiralty—Mr. J. D. Potter, 145, Minories, E.C.

Patent Office Publications are sold at the Patent Office.

For all Publications *except* the Hydrographical Works of the Admiralty, Patent Office Publications, and Ordnance and Geological Maps.

IN SCOTLAND:—Messrs. Oliver and Boyd, Edinburgh.

IN IRELAND:—Mr. E. Ponsonby, 116, Grafton Street, Dublin.

The Publications of the Ordnance Survey and of the Geological Survey can be purchased from Agents in most of the chief towns in the United Kingdom, from any Bookseller, or from the Director General of the Ordnance Survey, Southampton, or, in the case of Ireland, from the Officer in Charge, Ordnance Survey, Dublin. Ordnance Survey Publications can be obtained through Head Post Office in towns where there are no accredited Agents.

The following is a list of some of the more important Parliamentary and Official Publications recently issued:—

Parliamentary:

Statutes—

Public General, Session 1900, Sess. 2, 63 & d 1901. With Index, Tables &c. Roy. 8vo. Cloth. Price 3s.

Special Revised Edition. A.D. 1235–37 E. 3 to A.D. 1872–1873. XVI. Vols. Price 5s. 6d. each.

Revised Edition. Tables showing subsequent Repeals, affected by Acts of 63 & 64 Vict. 1900. Price 6d.

Statutes in Force. Chronological Table of and Index to. 17th Edition. To end of 1 Edward VII. (1901). 2 vols. Price 10s. 6d.

The Statutory Rules and Orders revised. Statutory Rules and Orders, other than those of a Local, Personal, or Temporary Character, issued prior to 1890, and now in force. Vols. I. to VIII. Price 10s. each.

Statutory Rules and Orders other than those of a local, Personal, or Temporary Character. With a List of the more important Statutory Orders of a Local Character arranged in classes, and an Index. Roy. 8vo. Boards. Issued in the years 1892, 1891, 1892, 1893, 1894, 1895, 1896, 1897, 1898, 1899, 1900, and 1901. Price 10s. each.

Statutory Rules and Orders in force on 31st December 1901. Index to. Price 10s.

Statutory Rules and Orders, 1902. Registered under the Rules Publication Act, 1893. In course of issue.

Index to Local and Personal Acts, 1801–1899. Price 10s.

Acts of Parliament Session 1901. In course of issue.

Ecclesiastical Statistics. Special Reports. Vols. II. to IX. United Kingdom and Colonial and other Possessions and the Principal Countries of the World. Price (complete) £1 7s. 5½d. (Vol. I. is out of print.)

[Cd. 662.] Military Education. Report of Committee on the Training of Officers. Price 1d. 3d.

[Cd. 663.] Do. do. do. Evidence. Price 5s. 9d.

[Cd. 1010.] Locomotives in Egypt. Comparative merit of British and others. Price 6d.

[Cd. 699.] Boiler Explosions Commission. Evidence, Appendices, and Index. Price 2s. 10d.

[Cd. 1105.] Trade. Annual Statement for 1901. Vol. I. Imports and Exports. Price 9s. 7d.

[Cd. 1111.] Land Registry. Report on Constructing a General Register of Title for London. Price 4½d.

[Cd. 1112.] Factories and Workshops. Report of Chief Inspector, 1901. Part I. Price 4s. 7½d.

[Cd. 1121.] Agricultural Returns, Great Britain. 1901. Price 1s. 3d.

[Cd. 1161.] Port of London. Report from Royal Commission, &c. With Appendices. Price 2s. 10½d.

H.C. No. 161. Life Assurance Companies. Statement of Accounts, 1901. Price 4d.

Census. England and Wales, Scotland and Ireland, 1901. Reports and Population Tables. In course of issue.

Mines. Reports of H.M. Inspectors for 1901, with Summaries of the Statistical portion under the provisions of the Coal Mines Regulation Act, 1887; Metalliferous Mines Regulation Act, 1872–1875; Slate Mines (Gunpowder) Act, 1882, Districts Nos. 1 to 13. In course of issue.

Mines in the United Kingdom and the Isle of Man. List of, for 1900. Price 5s.

Quarries do. do. do. 1900. Price 4s. 6d.

Mines Abandoned. List of the Plan of. Corrected to 31st December 1900. Price 1s.

Accidents at Tidal, Wharves, and Quays. Report upon. Price 6d.

The following appear periodically, and can be subscribed for:—

Trade of the United Kingdom with British Possessions and Foreign Countries, showing the Quantities and the Declared Value of the Articles.

Trade Returns of the British Colonies, with information relative to population and general condition.

Trade Reports by His Majesty's Representatives in Foreign Countries, and Reports on Commercial and General Interests.

The Proceedings of Parliament in public and private business, published daily. House of Lords. Price 1d. per 8 pp.; House of Commons, 1d. per 8 pp.

MEMORANDUM.

TO THE PRESIDENT OF THE BOARD OF TRADE.

SIR,

IN conformity with your directions I have caused an examination to be made of the statistics relating to the trade of the United Kingdom and of those foreign countries which are generally looked upon as being our principal industrial and trading competitors (viz., France, Germany, and the United States) in recent years, with the view of supplementing and bringing up to date the information contained in the Memorandum prepared by this Department and presented to Parliament in January 1897.

Following that Memorandum I propose in the first instance, and before quoting any of the figures relating specially to commerce, to refer to some points connected with the progress and development of the countries mentioned when looked at from a more general point of view than that afforded by the trade statistics only.

(i.) Growth of Population.

(a.) *General.*

It is obvious that a comparison of the trade of particular countries must be affected by considerations as to the relative growth of their populations, the tendency of their populations to become industrial as distinguished from agricultural, the natural resources of each country in respect of mineral wealth, and the extent to which its mineral wealth, plus such additional wealth of the same kind as it can obtain from other sources, is made available for industrial purposes.

First, then, as to population. Here the main facts may be stated shortly. The increase of the population of the United Kingdom in the last thirty years has been as follows :—

	Population of United Kingdom.	Increase.
	Millions.	Millions.
1871	31·5	—
1876	*33·2	1·7
1881	34·9	1·7
1886	*36·3	1·4
1891	37·7	1·4
1896	*39·5	1·8
1901	41·5	2·0

In the thirty years, therefore, there has been an increase in all of 10 millions, and the annual rate of increase, at least since 1881, has been under 1 per cent.

For France, we have the following figures :—

	Population of France.	Increase.
	Millions	Million.
1871	36·103	—
1876	36·906	0·803
1881	37·672	0·766
1886	38·219	0·547
1891	38·343	0·124
1896	38·517	0·174
1901	38·962	0·445

* Estimated at middle of year.

x 20451. Wt. 37773.

Here the increase in all has been under 3 millions in the thirty years ending 1901. The increase in each quinquennial period up to 1891 was at a diminishing rate, and though there has since been some recovery in this respect the population may be said to have remained virtually stationary.

For Germany, the figures are as follow :—

	Population of Germany.	Increase.
	Millions.	Millions.
1871	41·010	—
1875	42·727	1·717
1880	45·234	2·507
1885	46·856	1·622
1890	49·428	2·572
1895	52·280	2·852
1900	56·367	4·087

In the case of Germany, then, the increase in all has been just over 15⅓ millions, as compared with less than 3 millions for France and 10 millions for the United Kingdom. The rate of increase, which was about 1 per cent. per annum all through up to 1895 (except for the short period 1880–1885), was about 1½ per cent. per annum in the period 1895–1900.

Coming to the United States we get the following figures, approximate figures being interpolated in italics for the quinquennial dates between each Census for the sake of comparison with the figures above given :—

	Population of United States.	Increase.
	Millions.	Millions.
1870	38·558	—
1875	*44·357*	*5·799*
1880	50·156	5·799
1885	*56·389*	*6·233*
1890	62·622	6·233
1895	*69·622*	*7·000*
1900	*75·477	5·855

Here the increase of population in the thirty years ending 1900 has been about 37 millions, as compared with 15⅓ millions in Germany, 10 millions in the United Kingdom, and less than 3 millions in France.

The special importance of these figures in connexion with the subject of this Memorandum does not appear to arise so much from a greater rate of growth in Germany and the United States than in the United Kingdom, though that greater rate of growth must necessarily have had its influence on the industrial progress of those countries, as from the fact that the rate has now to be calculated on a mass of population largely exceeding that of the United Kingdom. As a fact, the addition to the population of the United States in the thirty years approaches in absolute numbers the total population of the United Kingdom at the present time. The change in relative population must largely affect all commercial comparisons.

(b.) *Urban Population.*

But there are "populations" and "populations." It is a matter of common knowledge that the whole addition to the population of the United Kingdom is practically an addition to the urban population, and that there is a continual transfer of population, if only to a moderate extent, from country to town. In the United States, although agriculture may have continued to absorb an increased number of the population, this cannot have been the case in recent years to anything like the same extent as formerly. Nor can it have been the case in Germany, where, as the country has been long settled, the increase of population must seek other pursuits than agriculture. In all

* Excluding the population of Hawaii.

the countries under comparison, even the United States, the increase in urban has been considerably greater than the increase in rural population. The following tables will be of interest as illustrating this point.

STATEMENT showing the Population of France in each of the undermentioned Census Years, distinguishing the Number and percentage Proportion of the Urban Population.*

Census Years.	Population of France.	Urban Population (Towns, &c. with over 2,000 Inhabitants.)†	Proportion of Urban to total Population.
			Per cent.
1846	35,400,486	8,646,743	24·4
1851	35,783,170	9,135,459	25·5
1856	36,139,364	8,844,828‡	27·3‡
1861	37,386,313	10,789,766	28·9
1866	38,067,064	11,595,348	30·5
1872	36,102,921	11,234,899	31·1
1876	36,905,788	11,977,396	32·4
1881	37,672,048	13,096,542	34·8
1886	38,218,903	13,766,508	35·9§
1891	38,343,192	14,311,292	37·4§
1896	38,517,332	15,025,812	39·1§
1901	38,961,945	Information not yet available.	

The proportion of the town population is thus constantly increasing in France, the increase in proportion to the total population since 1872 having been from 31·1 per cent. to 39·1 per cent. in 1896, while the increase in absolute numbers in the period was about 3,800,000, or 1,400,000 more than the increase of total population.

In the case of Germany the figures are even more striking:—

STATEMENT showing the Population of the German Empire in each of the undermentioned Census Years, distinguishing the Number and percentage Proportion of the Urban Population.||

Census Years.	Population of the German Empire.	Population of Towns, &c. (with at least 2,000 Inhabitants).¶	Proportion of Urban to total Population.
			Per cent.
1871	41,010,150	14,790,798	36·1
1875	42,727,360	16,657,172	39·0
1880	45,234,061	18,720,530	41·4
1885	46,855,704	20,478,777	43·7
1890	49,428,470	23,243,229	47·0
1895	52,279,901	26,859,511	51·4
1900	56,367,178	30,633,075	54·3

In absolute numbers, the increase in the town population between 1871 and 1900 was 15¾ millions, or about equal to the increase of total population in the interval.

For the United States the figures are also remarkable. In spite of the United States being largely an agricultural country and a field for

* Statistique du Dénombrement de 1896, p. 29, &c.

† The mimimum limit of a town in the three Tables for France, Germany, and the United States is different. The effect is that the urban population of the United States is rather understated compared with the others, but this under-statement is probably not very material.

‡ These are the figures given in the French official returns mentioned in the note * above. But 27·3 per cent. of 36,139,364 would give over 9,800,000, and it would consequently seem that the total of the urban population in 1856 should have been stated as 9,844,828.

§ So in original. The correct figures would seem to be 36·0, 37·3, and 39·0 for 1886, 1891, and 1896 respectively.

|| Die Volkszählung am 1. Dezember 1890 im Deutschen Reich, p. 15., &c.

¶ *See* note † above.

agricultural immigrants, the absolute increase of the town population, as well as of its proportion to the whole population, is noteworthy. The following are the figures :—

STATEMENT showing the Population of the United States in each of the undermentioned Census Years, distinguishing the Number and percentage Proportion of the Urban Population.*

Census Years.	Population of the United States.	Population of Cities having 8,000 Inhabitants or more.†	Proportion of Urban to total Population.
			Per cent.
1790	3,929,214	131,472	3·35
1800	5,308,483	210,873	3·97
1810	7,239,881	356,920	4·93
1820	9,633,822	475,135	4·93
1830	12,866,020	864,509	6·72
1840	17,069,453	1,453,994	8·52
1850	23,191,876	2,897,586	12·49
1860	31,443,321	5,072,256	16·13
1870	38,558,371	8,071,875	20·93
1880	50,155,783	11,318,547	22·57
1890	62,622,250	18,272,503	29·18
1900	75,477,467	24,992,199	33·11

Thus the increase in the proportion of the urban population between 1870 and 1900 was from 20·93 to 33·11 per cent., and the increase in absolute numbers from 8,000,000 to nearly 25,000,000, or about 17 millions, out of a total increase of 37 millions in the population. The town population of the United States, in fact, already exceeds greatly that of France, and would probably be found to be nearly equal to that of Germany at the present time if towns with corresponding limits of population could be compared.

In absolute numbers the increase in the town population, both in Germany and the United States, is beginning to be greater than can be the case in the United Kingdom. In Germany the increase in thirty years is 15¾ millions, and this exceeds by 5¾ millions the total increase of the population of the United Kingdom in the interval (see *supra*, p. 3), so that, even allowing for a transfer from rural to urban in the United Kingdom, the absolute increase of the numbers of the urban, and we may reasonably assume of the commercial, manufacturing, and industrial population in Germany has probably been somewhat greater than in the United Kingdom. As to the United States, there can hardly be any question. The increase of 17 millions in the town population of the United States between 1870 and 1900 exceeds by 7 millions the total increase of the population of the United Kingdom in the same period, and the transfer from rural to urban with us cannot have been anything like that figure. In other words, both Germany and the United States have attained to the position of increasing their non-agricultural population more quickly than the United Kingdom, and looking at the larger mass of the population in both countries and their rapid rate of growth, there seems no doubt that unless something happens, which does not seem probable, to make people go back to the land, both Germany and the United States will, in a short time, possess a larger non-agricultural population than we have, and one which will increase more rapidly in numbers.

The conclusion, therefore, would seem to be that the conditions of the manufacturing and industrial predominance of the United Kingdom, and even of its manufacturing and industrial pre-eminence, are becoming different from what they were when the non-agricultural population of every other country in the world was smaller than in our own. Industry and manufactures abroad, particularly in the United States and Germany, have become much bigger things, relatively, than they were. It has long been foreseen that this condition of affairs was likely to come about sooner or later, but the change appears now to be already with us, and the developments will need to be closely watched.

* Twelfth Census of the United States, 1900, Vol. I., Population, p. lxxxiii.
† *See* note † on previous page.

(ii.) Production.

It is not easy to follow up the idea in the preceding paragraphs by an actual comparison of the increase or decrease of persons employed in different occupations, for the figures, owing to changes of classification at different dates, are subject to qualifications in detail which make it difficult to use them in a memorandum like the present.

I may, however, safely refer to the figures of production of coal and iron as undoubtedly possessing an important bearing on the question under consideration :—

QUANTITY of Coal Produced.

—	Annual Average in			Increase in 1890–94 over 1870–74.		Increase in 1896–1900 over 1870–74.	
	1870–74.	1890–94.	1896–1900.	Amount.	Per cent.	Amount.	Per cent.
	Mln. tons.	Mln. tons.	Mln. tons.	Mln. tons.		Mln. tons.	
United Kingdom -	120	180	209	60	50·0	89	74·2
France - -	15	26	31	11	73·3	16	106·7
Germany - -	32	73	97	41	128·1	65	203·1
United States -	42*	153	203	111	264·3	161	383·3

The percentage of increase in each case is greater (in the case of Germany and the United States much greater) than in the United Kingdom. Of course one reason for this may be the smallness of the unit from which the comparison is begun. It will be observed, however, that in the case of the United States the absolute increase in the whole period covered by the table (161 million tons) is greater than the absolute increase in the case of the United Kingdom (89 million tons), and that the absolute increase in Germany is equal to three-fourths of that in the United Kingdom, although our total production is more than twice as great as that of Germany The total production of the United States in 1896–1900 was virtually equal to our own.

Considering the importance of coal as an instrument of production, these figures appear to confirm in a remarkable manner the inference from the figures as to population which have already been quoted, *i.e.*, as to the greater relative growth of the main factors in manufacturing and industrial power in both Germany and the United States than in this country.

Another set of figures may be referred to as bearing on the same point. In the Return No. 213 of Session 1901, as to Coal Production and Consumption, tables are given of the estimated consumption in each country, adding the imports, if any, to the quantity produced at home, and deducting the exports, if any. Going back as far as the Return carries us, we get the following figures :—

ESTIMATED Quantity of Coal Consumed.

—	1888.	1900.	Increase in 1900 over 1888.	
			Amount.	Per cent.
	Million tons.	Million tons.	Million tons.	
United Kingdom - - -	134	167	33	24·6
France - - - -	31	46	15	48·4
Germany - - - -	49	99	50	102·0
United States - - -	102·5	235	132·5	129·3

Here the percentage increase is again much greater in each case than it is in the United Kingdom, while in the United States the absolute increase is more than four times the absolute increase in the United Kingdom, and in Germany one and a half times the absolute increase in the United Kingdom.

* Average of 3 years 1870, 1873, and 1874.

It must not be forgotten, however, that these figures are subject to the qualification that one of the special industries of the United Kingdom is Shipping. If bunker coal shipped at United Kingdom ports were to be included, and if the coal taken on board English ships abroad were also to be included, the figures of coal consumption by the United Kingdom would be greatly augmented.

The figures are also subject to another qualification. There are many descriptions of coal. The increase in burning power might appear different from the mere increase in weight, if burning power, apart from weight, could be stated. But the increase in weight is so enormous in both Germany and the United States that, probably, making all allowance for superior burning power in the coal of the United Kingdom, any inferences from the above figures would only be modified, and not changed in character.

With regard to Pig Iron we get the following comparison between the United Kingdom, France, Germany, and the United States:—

QUANTITY of Pig Iron Produced.

—	Annual Average in			Increase in 1890–94 over 1870–74.		Increase in 1896–1900 over 1870–74.	
	1870–74.	1890–94.	1896–1900.	Amount.	Per cent.	Amount.	Per cent.
	Mln. tons.	Mln. tons.	Mln. tons.	Mln. tons.		Mln. tons.	
United Kingdom -	6·4	7·3	8·9	0·9	14·1	2·5	39·1
France - -	1·2	2·0	2·5	0·8	66·7	1·3	108·3
Germany - -	1·8	4·9	7·4	3·1	172·2	5·6	311·1
United States -	2·2	8·1	11·5	5·9	268·2	9·3	422·7

Here again the percentage increase between the first and last quinquennial periods is much greater in each case than it is in the United Kingdom, and in amount the increase in the United States (9·3 million tons) is nearly four times the increase in the United Kingdom (2·5 million tons), while in Germany the increase (5·6 million tons) is more than twice the increase in the United Kingdom.

Both in raising coal and producing pig iron, therefore, an outlet would appear to have been found to some extent for the annually increasing numbers of the population available for industry and manufacturing in Germany and the United States; and it cannot be said that the predominance or even the pre-eminence of the United Kingdom are any longer what they were, as far as these old fields of industry are concerned.

I have hitherto dealt with absolute comparisons. When proportion to population is considered, however, a somewhat different picture is presented.

1895–99	0·22	0·06	0·13	0·15

It has to be admitted that the table relating to consumption of coal, which is perhaps the most important of the three for our present purpose, shows that in both Germany and the United States, with populations increasing faster than our own, the amount of the increase per head is greater than in the case of the United Kingdom, *i.e.*, comparing the annual averages for 1896–1900 with those for 1885–89. The increase per head in the case of the United States, indeed, is more than double that in the United Kingdom. Nevertheless, the tables clearly show that we still occupy the foremost place under all three heads when population is taken as the measure.

(iii.) Foreign Trade.

I now turn to the exports and imports of the countries with which we are concerned, and, to begin with, have to quote the following figures:—

* These figures are extracted from the Return No. 213, 1901, which only goes back with this information to 1883.

† Estimated.

COMPARISON of the Annual Exports (Special*) of the Undermentioned Countries for the last Twenty-one Years (in millions sterling).

Year.	United Kingdom.	France.	Germany.	United States.†
	Million £.	Million £.	Million £.	Million £.
1880	223	139	145	172
1881	234	142	149	184
1882	241	143	160	153
1883	240	138	164	168
1884	233	129	160	151

1899	255‡	166	203§	251
1900	283‡	164	222§	286

FIVE Years' Averages at Beginning and End of Period compared.

—	Average, 1880–84.	Average, 1896–1900.	Increase (+) or Decrease (—) in 1896–1900 compared with 1880–84.	
			Amount.	Per cent.
	Million £.	Million £.	Million £.	
United Kingdom	234	249	(+) 15	(+) 6·4
France	138	150	(+) 12	(+) 8·7
Germany	156	192	(+) 36	(+) 23·1
United States	166	237	(+) 71	(+) 42·8

This last table shows that, comparing the beginning and the end of the period from 1880 to 1900, there was a general increase, measured by values, in the export trade of all four countries. In proportion, the increase was greater, alike in the cases of France, Germany, and the United States than in that of the United Kingdom, while in absolute amount it was also greater in both Germany and the United States. It must be remembered, however, that the level from which all three of our principal industrial competitors started in 1880–4 was considerably lower than that from which the United Kingdom started, and it has to be pointed out that, especially if allowance be made for the fact of the figures for this country being exclusive of the value of our exports of ships and their machinery (a somewhat similar, though considerably smaller, allowance requires to be made in the case of Germany), we still remain at the head of the list although very nearly approached by the United States. After what has already been said with regard to the statistics of the population and production of coal and iron in each country, the result shown by this table will cause no surprise: the

* Special imports are imports for home consumption. Special exports are exports of domestic produce.

† Years ended 30th June.

‡ Excluding the value of new ships, and of their machinery exported. These exports, which amounted in value to 9·2 million £ in 1899, and 8·6 million £ in 1900, were not recorded prior to 1899.

§ Excluding the value of ships exported and of the "Improvement Trade" for home account. These items, which were not formerly included in the official totals of the value of the exports from Germany, amounted to 5·7 million £ in 1897, 6·9 million £ in 1898, 6·9 million £ in 1899, and 8·1 million £ in 1900.

figures all tend in the same direction. But there is nothing in those here in question to suggest that while the export trade of our neighbours has been increasing our own export trade has been diminishing or even standing still.

Amount of Foreign Trade per head.

But it is necessary to examine the facts not only as they stand alone, but as they appear when amounts per head are compared. This comparison is made in the following table, the figures being carried back, except in the case of Germany, for which they are not available, to the year 1870 :—

ANNUAL Exports (Special), per head of the population, of the undermentioned Countries, for the Quinquennial Periods beginning 1870–74.

——	United Kingdom.	France.	Germany.	United States.
Average of period—	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1870–74	7 7 3	3 15 0	2 16 7*	2 9 11
1875–79	6 0 0	3 14 11	3 3 0	2 16 3
1880–84	6 13 2	3 13 5	3 8 8	3 5 11
1885–89	6 3 8	3 9 3	3 5 6	2 11 10
1890–94	6 2 11	3 11 4	3 2 9	2 19 0
1895–99	5 19 5	3 14 8	3 7 2†	2 18 4

Thus the exports per head in the United Kingdom are far in excess of what they are in either France or Germany, and are still more in excess of what they are in the United States. Since 1875, also, the exports per head have been nearly stationary in all the countries named, so that no one is getting ahead of the others in this respect. I mention 1875, because in the period 1870–74 the figures for the United Kingdom were largely swollen by such exceptional circumstances as the war between France and Germany, the payment of the French indemnity to Germany, and the "boom" in our iron and coal trades at a time when railway construction abroad was brisk. These and other causes all contributed to unusually high prices.

Much the same may be said of the imports, as to which it will be sufficient to compare the amounts per head :—

ANNUAL Net Imports (Imports less re-exports), per head of the population of the undermentioned Countries, for the Quinquennial Periods beginning 1870–74.

——	United Kingdom.	France.	Germany.	United States.
Average of period—	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1870–74	9 2 4	3 15 8	4 6 3*	2 18 7
1875–79	9 10 4	4 6 7	4 6 1	2 2 5
1880–84	9 15 4	5 1 4	3 8 3	2 15 7
1885–89	8 14 2	4 6 10	3 9 5	2 8 11
1890–94	9 7 3	4 8 0	4 2 2	2 11 11
1895–99	9 17 2	4 4 9	4 6 10‡	1 19 11

Thus the imports of the United Kingdom per head are more than double those of any of the other countries named per head; nearly five times the imports per head of the United States. And none of the countries named are gaining on the United Kingdom in this respect.

(iv.) British Trade with Foreign Countries.

(a.) *British Trade with France.*

The following tables show the values of our imports from, and of our exports of British and Irish produce to, the three countries with which we are concerned.

We have, first, the following tables as to our trade with France :—

* Average of three years from 1872–74. Although the figures are given in the table it should be remembered that German statistics of imports and exports were inadequately organised until about 1879–80.

† *See* note (§) on previous page.

‡ In this calculation the values of the imports of ships and of the imports in the "Improvement Trade" for home account in 1897, 1898, and 1899 have been omitted in order to make the figures comparative.

Imports into the United Kingdom from France, and Exports from the United Kingdom to France in the last Twenty-one Years compared.

Year.	Imports.	Exports (British and Irish Produce).	Year.	Imports.	Exports (British and Irish Produce).
	Million £.	Million £.		Million £.	Million £.
1880	42·0	15·6	1891	44·8	16·4
1881	40·0	17·0	1892	43·5	14·7
1882	39·1	17·4	1893	43·6	13·4
1883	38·6	17·6	1894	43·4	13·5
1884	37·4	16·7	1895	47·5	13·9
1885	35·7	15·0	1896	50·1	14·2
1886	36·6	13·6	1897	53·3	13·8
1887	37·1	13·7	1898	51·4	13·7
1888	38·8	14·9	1899	53·0	15·2*
1889	45·8	14·7	1900	53·6	19·7*
1890	44·8	16·6			

Five Years' Averages.

—	Average of 1880–84.		Average of 1896–1900.		1896–1900 compared with 1880–84.			
					Increase (+) or Decrease (−).		Increase (+) or Decrease (−).	
					Total.		Per Head.§	
	Total.	Per Head§	Total.	Per Head§	Amount.	Per Cent.	Amount.	Per Cent.
	Million £	£ s. d.	Million £	£ s. d.	Million £		s. d.	
Imports	39·4	1 2 5	52·3	1 6 0	+12·9	+32·7	+ 3 7	+ 16·0
Exports	16·9	0 9 7	15·3	0 7 7	− 1·6	− 9·5	− 2 0	− 20·9

Thus our imports from France have increased considerably, notwithstanding the slow growth of the population of that country, and the increase, on analysis, is found to have been largely occasioned by an increase of miscellaneous articles, with a specially large increase of the imports of silk manufactures and smaller increases in the cases of sugar, wine, and woollen manufactures. There is, however, no question of the displacement of home manufactures in the United Kingdom through increased imports from France. Our exports to France, on the other hand, show a sensible decline, in spite of a special increase of 4 million £ in 1900 due to largely increased exports of coal to France at largely increased prices.

(b.) *British Trade with Germany.*

Coming to Germany, we have the following Tables :—

Imports into the United Kingdom from Germany, and Exports from the United Kingdom to Germany in the last Twenty-one Years compared.

Year.	Imports.	Exports (British and Irish Produce).	Year.	Imports.	Exports (British and Irish Produce).
	Million £.	Million £.		Million £.	Million £.
1880	24·4	16·9	1891	27·0	18·8
1881	23·7	17·4	1892	25·7	17·6
1882	25·6	18·5	1893	26·4	17·7
1883	27·9	18·8	1894	26·9	17·8
1884	23·6	18·7	1895	27·0	20·6
1885	23·1	16·4	1896	27·6	22·2
1886	21·4	15·7	1897	26·2	21·6
1887	24·6	15·7	1898	28·5	22·5
1888	26·7	15·8	1899	30·1	25·2†
1889	27·1	18·5	1900	31·2	26·4†
1890	26·1	19·3			

* Excluding the value of new ships and of their machinery exported, in order to make the figures comparative (the total value of such exports to France in 1899 was 132,000*l.*, and in 1900, 267,000*l.*).

† Excluding the value of new ships and of their machinery exported. (The value of such exports to Germany in 1899 was £828,000, and in 1900 £1,593,000.)

§ *i.e.*, per head of the population of the United Kingdom.

Five Years' Averages.

—	Average of 1880–84.		Average of 1896–1900.		1896–1900 compared with 1880–84.			
					Increase (+) or Decrease (−).		Increase (+) or Decrease (−).	
					Total.		Per Head.§	
	Total.	Per Head.§	Total.	Per Head.§	Amount.	Per Cent.	Amount.	Per Cent.
	Million £	£ s. d.	Million £	£ s. d.	Million £		s. d.	
Imports -	25·0	0 14 3	28·7	0 14 3	3·7	14·8	—	—
Exports -	18·1	0 10 3	23·6*	0 11 9	5·5	30·4	+1 6	+14·6

It must be recollected that these figures relate to "direct" trade only. A not inconsiderable amount of our import trade with Germany is carried on through Dutch and Belgian ports, and appears in our official returns as imports from Holland or Belgium.† On the other hand, some of our trade with Russia and Austria-Hungary is carried on through German ports, and appears in our returns as trade with Germany. But apart from these qualifications, which would, of course, affect the earlier returns as well as the later, although perhaps to a slightly less extent, the above figures show that in the period under review there was an increase in our imports from Germany to the extent of 3·7 million £. On analysis I have found that there has been some decrease in the imports of agricultural produce from Germany, balanced by an increase in the imports of sugar, and some slight increases in the imports of cotton, woollen, glass, and iron manufactures, none of which, however, are imported to any great extent. On the other hand, our exports to Germany increased by 5½ million £, or over 30 per cent. This increase was largely due to one special article, coal; but woollen yarns, cotton manufactures, iron and steel manufactures, and machinery, also contributed their share. Whatever these figures show, it is clear that they do not show that there has been any material displacement of home manufactures in our home markets by Germany.

(c.) *British Trade with the United States.*

The following are similar tables as to our trade with the United States:—

Imports into the United Kingdom from the United States, and Exports from the United Kingdom to the United States in the last Twenty-one Years compared.

Year.	Imports.	Exports (British and Irish Produce).	Year.	Imports.	Exports (British and Irish Produce).
	Million £.	Million £.		Million £.	Million £.

1890 - - -	97·3	32·1			

* See note (†) on previous page.

† Much the same may be said of our exports. Our export returns, however, are intended to show the countries of actual destination so far as circumstances permit.

§ *i.e.*, per head of the population of the United Kingdom.

FIVE Years' Averages.

—	Average of 1880–84.		Average of 1896–1900.		1896–1900 compared with 1880–84.			
					Increase (+) or Decrease (−).		Increase (+) or Decrease (−).	
					Total.		Per Head.*	
	Total.	Per Head.*	Total.	Per Head.*	Amount.	Per Cent.	Amount.	Per Cent.
	Million £	£ s. d.	Million £	£ s. d.	Million £		s. d.	
Imports -	96·8	2 15 0	120·9	3 0 2	+24·1	+24·9	+5 2	+ 9·4
Exports -	28·7	0 16 4	18·8	0 9 4	− 9·9	−34·5	−7 0	−42·9

This last table shows a very large increase in our imports from the United States. Those imports, however, continue to be made up principally of the products of agriculture and stock raising, timber, and petroleum—to the extent, that is, of at least 110 out of the total of about 139 million £ in 1900. There has been some increase in recent years in such articles as machinery, unwrought steel, and a few items of less importance (*e.g.*, copper, lead, electrical goods, and miscellaneous iron wares), which must not be left out of account. For the moment, however, the imports of unwrought steel appear to have virtually ceased, while, as regards machinery, the trade has probably been to a large extent a special one in new types (principally electrical and metal working), to which our makers will easily adapt themselves. In any event there has evidently been no displacement of the home market in respect of machinery, our exports of such goods having tended to increase rather than to diminish up to 1900, though there was some decline in 1901. The special circumstances of copper are well known. On the other hand there is a considerable decline in our exports to the United States. Previous to 1896 these exports fluctuated very considerably from year to year, the amounts having varied from as high as 32 million £ in 1890 to as low as 18¾ million £ in 1894. They were nearly 28 million £ in 1895, but suddenly dropped (principally owing to a fall in woollen and worsted goods and tin plates) to under 21 million £ in 1896 and 1897, and since that time have not again been as high as 20 million £. The low level (14¾ million £) of 1898 was due mainly to the coming into operation of the Dingley tariff in 1897, the total for which year had been kept up by the rush to enter goods under the lower rates of the former tariff prior to the date of the application of the 1897 one. Since 1898 the tendency has been towards regaining the level of 1896–7, but there is no doubt that our exports to the States, particularly in woollens, have been severely hit by the tariff changes. Moreover, in view of the figures already quoted as to the rapid increase of industrial population and of productive energy in relation to coal and iron in the United States, it need not be a matter of surprise if, with the assistance of an eminently protective tariff, the States show an increasing ability to manufacture for their home market. The broad fact remains, however, that we are doing less in the way of export trade to the United States than was the case a few years ago, and that there is little sign or immediate prospect of substantial recovery.

Reverting for a moment to the point as to our imports from the United States, it may be mentioned that it has been alleged, and probably with good reason, that the United States have been re-purchasing American securities in European markets to a large extent in recent years, and principally in the United Kingdom. This would help to explain a portion of the large increase in the value of our imports from the States since 1895 observable from a glance at the figures quoted above.

(v.) British Trade with France, Germany, Holland, and United States in relation to our Total Foreign Trade.

But the question of the progress of our trade with our chief competitors may be examined from another point of view. How has our trade with each varied when considered in relation to our whole foreign trade? The following

* *i.e.*, per head of the population of the United Kingdom.

table furnishes information on this point so far as regards imports. I have included Holland in this statement, as, in addition to the increase in our "direct" trade with Germany already referred to, there may have been some increase in our *indirect* import trade from that country through Dutch ports, and it is desirable that this point should not be overlooked.

STATEMENT showing the Total Value of the Imports of Merchandise into the United Kingdom in each of the undermentioned Years; with the Amount (Value) of the Imports received from France, Germany, Holland, and the United States, respectively, and the percentage Proportion of those Imports to the Total Imports of each year. [The amounts are stated in thousands of pounds sterling.]

It will be seen from this table that there have been no striking variations in the proportions of our total import trade which we have carried on with the European countries mentioned. There have, of course, been fluctuations from year to year, and the tendency as regards absolute amounts has been consistently in the direction of increase. To this extent the table confirms what has already been said, and it also indicates that our import trade with the three countries referred to, taken as a whole, has progressed somewhat more rapidly than similar trade with all other countries taken together. I may point out, however, that (comparing, as before, the averages for 1880–84 and 1896–1900) our imports from France have increased in amount more than our imports from Germany and Holland, and that, as regards percentage proportions of our whole import trade, our imports from France still tend towards increase, while our imports from Germany and Holland combined remain virtually stationary. Our imports from the United States have increased largely, especially during the last five years, both in absolute amount and in proportion to our whole import trade, but the case of our import trade with the United States calls for no special observations beyond those made above.

The following table gives similar information in regard to our exports to that contained in the foregoing table in regard to our imports:—

STATEMENT showing the Value of the Exports of British and Irish Produce from the United Kingdom in each of the undermentioned Years, with the Amount (Value) of the Exports to France, Germany, Holland, and the United States respectively, and the percentage Proportion of those Exports to the Total Exports of each Year. [The amounts are stated in thousands of pounds sterling.]

1896	240,146	14,152	5·89	22,244	9·26	8,334	3·47	20,424	8·50
1897	234,220	13,819	5·90	21,602	9·22	8,855	3·78	20,995	8·96
1898	233,359	13,706	5·87	22,526	9·65	8,619	3·69	14,716	6·31
1899	255,296*	15,151*	5·93	25,168*	9·86	9,141*	3·58	18,119	7·10
1900	282,604*	19,711*	6·97	26,407*	9·34	10,497*	3·71	19,781	7·00

A glance at this table will show that, taking first the European countries and comparing, as before, the five years 1880–84 with the five years 1896–1900, our exports to France have diminished both in absolute amount and in proportion to our whole export trade, and this notwithstanding the special increase of over 4 million £ in 1900, previously adverted to. Our exports to Germany and Holland combined, however, have increased sensibly both in amount and in proportion, and the increase may be said to have taken place during the period 1896–1900 almost exclusively and to be solely due to our "direct" exports to Germany. Our exports to Holland have decreased in amount and, of course, in proportion to the whole export trade. On the other hand, the figures for the United States, both as regards amounts and proportions, show a very heavy fall, a fall to which reference has already been made.

(vi.) Exports of Manufactures from France, Germany, and United States.

But the question naturally arises at this point whether the three countries with which we are particularly concerned have not been increasing specially their exports of manufactured articles in the period under review. The following table bears upon this question:—

* Excluding the value of new ships and of their machinery exported, in order to make the figures comparative.

EXPORTS of Manufactured Articles from France, Germany, and the United States, to all Countries in the Undermentioned Years.

Years.	France.	Germany.	United States.
	Million £.	Million £.	Million £.
1880	74	83	21
1881	75	88	24
1882	76	94	28
1883	74	98	28
1884	68	101	28
1885	65	90	31
1886	70	97	28
1887	70	102	28
1888	68	104	27
1889	77	105	29
1890	80	107	31
1891	77	102	35
1892	75	98	33
1893	70	100	33

1896	76	115	48
1897	77	115	58
1898	77	120	61
1899	91	136	71
1900	90	149	90

FIVE Years' Averages.

—	Average, 1880–84.	Average, 1891–95.	Average, 1896–1900.	Increase in 1896–1900 compared with 1880–84.	
				Amount.	Per Cent.
	Million £.	Million £.	Million £.	Million £.	
France	73	73	82	9	12·3
Germany	93	101	127	34	36·6
United States	26	35	66	40	153·9

These are figures derived from the official statistics of the respective countries. In weighing them, however, it must be remembered that the phrase "manufactured articles" does not necessarily cover the same goods in all cases.

Quantum valeat, the first table shows that, as regards the value of the exports of manufactured articles, France occupied about the same position in the three years 1896–98 as she did in the period 1880–84, but that in the last two years for which figures are given there was some advance, with the result that comparing the full five years 1896–1900 with 1880–84, there was on the average an increase of about 9 million £ per annum, or over 12 per cent. On examination, the addition is found to consist mainly of increases in cotton tissues, millinery and artificial flowers, clothing and made-up articles, machinery, and ceramic products and glass wares. In none of these articles, however, has there been any appreciable increase of our imports from France, so that the increase in French exports does not mean displacement of our home market. As to Germany the increase is even more striking, the average for 1880–84 having been 93 million £, while that for 1896–1900 was 127 million £—an increase of 34 million £, or about 36½ per cent. Here, however, it is to be noticed that the figures for the later years are inclusive of the value of the "improvement trade" referred to in the footnote on p. 10, *i.e.*, so far as that trade relates to "manufactured goods" as distinguished from food products, &c., and of ships. This may possibly account for some 4 or 5 million £ of the increase. For the rest, there has been conspicuous increase under the following heads, viz. :—machinery; clothing and

made-up articles; coloured prints, engravings and photographs; books, maps, and music; coal-tar dyes; "coarse ironwares;" "fine ironwares;" leather; and toys. Here again, although there may have been some increases in our imports from Germany, such increases have been comparatively small in amount, and there has been nothing which can in any way be described as an inroad upon our home market. With regard to the United States, it will be seen that the advance made in the export of so-called manufactured goods between 1880–84 and 1896–1900 was larger in amount, and very much larger in proportion, than that made by Germany. The list of "manufactured goods," however, in the case of the United States, includes some articles which would not, perhaps, be classed by us as manufactured. Chief among these may be mentioned refined mineral oil, and paraffin and paraffin wax, the exports of the first-named article having reached a value of over 14 million £ in 1899–1900, while the exports of paraffin and paraffin wax accounted for a further sum of 1·8 million £ in the same year. Among the other articles comprised under this head in which the United States have made conspicuous advance are iron and steel and manufactures thereof (including machinery), copper and copper manufactures, cotton manufactures; leather, agricultural implements, and the comprehensive group of "chemicals, dyes, drugs, and medicines." As above stated, there have been some increases in our imports from the United States of iron and steel, machinery, and copper, and leather may also be added to the list. But here again the increases have been comparatively small in amount, and there has been nothing in the fact of such increases to indicate displacement of British trade at home.

(vii.) Exports of Manufactures from the United Kingdom.

Before turning from this branch of the subject it will be interesting to see how matters stand with regard to our own exports of manufactured goods. Table F. in the Appendix supplies the materials for determining our position in this respect. The table has been compiled from the December issue of the "Monthly Accounts of Trade and Navigation" for each year since 1883, the classification of imports and exports into manufactured goods, raw materials, &c., adopted in those Accounts only having been commenced in that year. It will be seen from that table that, taking the two years 1883 and 1884, the only years of the period 1880–84 (the period we have hitherto been concerned with in our comparisons) for which figures are available, the average value of our exports of manufactured goods was 212 million £, while the average of the period 1896–1900 (excluding ships, in order to make the figures comparative) was 210 million £, the amounts being practically identical. In the interval there had been some considerable fluctuations, the lowest point touched having been 185 million £ in 1894 and the highest 230 million £ in 1890. It may be added that the figure for last year (1901), excluding ships as before, was 222 million £, a sum slightly less than that for 1900, although larger than in any other year since the record year in regard to the value of our exports of manufactured goods—1890. A comparison of the items given in the table shows that comparing 1896–1900 with 1883–84, as before, there was a decrease of about 11 million £ under the head of yarns and textile fabrics, a decrease which was nearly equalized by increases under the heads of machinery and miscellaneous manufactured articles—the averages for metals and metal manufactures, apparel and articles of personal use, and chemicals and chemical and medicinal preparations remaining virtually unchanged. The fall in the case of yarns and textile fabrics was almost entirely due to a decline in the value of the raw materials previously imported contained in the goods exported, and generally it may be said that the factor of reduced price of raw materials has influenced the non-expansion of the value of our exports of manufactured goods as between the periods compared.* Nevertheless, the fact of large expansion in the cases of Germany and the United States, taken in conjunction with a stationary condition of affairs as regards the United Kingdom, is not so satisfactory as could be wished, even allowing for the circumstances in regard to population and coal and iron production

* This will be seen on reference to the particulars relating to the average prices at which goods have been exported given in the issues of the "Statistical Abstract for the United Kingdom."

already adverted to and for the special effect upon the figures of our export trade for recent years of the war in South Africa and the famine and epidemic visitations in India. What is satisfactory, however, is that while we hear of industrial distress in Germany and other Continental countries, nothing of the sort exists here. Pauperism is not increasing, and the proportion of skilled workmen unemployed is comparatively small.

(viii.) Imports of Manufactures into United Kingdom.

At the same time it is evident from Tables D. and E. in the Appendix (which have also been compiled from the "Monthly Accounts of Trade and Navigation") that the import of articles called manufactured into the United Kingdom in the same period has enormously increased, viz., from 53 million £ in 1883–84 to 88 million £ in 1896–1900. Moreover, the increase in this case has been virtually continuous throughout the whole period. The bulk of this increase is under the heads of leather, machinery, and silk and woollen goods, but there have also been increases of less magnitude under the heads of cotton manufactures, unenumerated glass wares (including bottles), and iron and steel manufactures. As to these articles it may be observed, first, that leather is really a raw material; second, that, as we have already seen, our exports of machinery have tended to increase and not to diminish in the period under review; and, third, that as regards our woollen industry, with which imported woollens might compete, the United Kingdom still more than holds its own, exporting as it does at least 5 million £ worth per annum more than it imports, even after allowing for the reduction of at least 2 million £ per annum, caused by the operation of the latest United States Tariff Act. The tables, moreover, are subject to the observation that so-called manufactures, even of an advanced kind,* are frequently the raw materials of other industries. Still the figures undoubtedly afford an indication of an immense advance of manufacturing abroad, though they by no means justify the inference that our home manufacturing is being displaced.

On the whole, the conclusion from this part of the investigation is that in spite of the strides made by Germany and the United States in recent years we still preponderate greatly as a country manufacturing for export. Both Germany and the United States have largely developed in capacity to manufacture, not only for their home markets but for export also, and even France has made some gains. Our exports, however, consist more largely of manufactured goods in proportion to our whole exports than do those of France and the United States, but we are run very close by Germany in this respect. Nevertheless, measuring per head of the population we are, as we have already seen, far ahead of Germany or any other of our competitors.

(ix.) Trade with Neutral Markets.

(*a.*) *Imports into Neutral Markets from United Kingdom, France, Germany, and United States.*

Turning now to that portion of our inquiry relating to neutral markets, I have first to refer to the tables in Section A. of the Appendix. These tables are designed to compare the progress of the Foreign trade of the United Kingdom, France, Germany, and the United States respectively, as regards imports into the various countries with which their trade is carried on, *according to the statistics of those countries.* The object of this method of proceeding is to obtain a comparison on the same basis throughout, and to avoid discrepancies that might arise from different classifications and definitions in the returns of the United Kingdom, France, Germany, and the United States themselves.

* Such, for instance, as tin plates, boiler-plates, sheet metal generally, wire of all sorts, textiles, alkali, nail rods, paper for printing, unwrought steel, chemical dyes, bleaching materials, watch and clock fittings, &c.

The effect of these tables is indicated generally in the statement below.

STATEMENT showing the average annual amount of the Imports of the undermentioned Countries in 1893–95 and 1898–1900, and the Proportion of their Imports from the United Kingdom, Germany, France, and the United States respectively.*

—	Total Imports (Millions Sterling).		Proportion from

British Guiana -	2	1	54	53	—	0·1	0·9	0·5	25·8	28·3

From this table it is clear that the greater proportion of the trade in non-European countries, and in British possessions everywhere (except British North America), is carried on with the United Kingdom. At the same time this statement of fact requires to be considered in connection with the further fact, that our proportion of the trade of some of the countries in question, and indeed, though to a less extent, of the trade of some of our colonies also, has slightly diminished, comparing the periods 1893–95 and 1898–1900. We have lost ground, *proportionately*, in Argentina, Uruguay, Chile, and China, though the percentage loss is in each case small, and in each of these countries the United States have gained ground. In the Japanese trade we have lost more heavily, our share of Japan's imports having declined from 33 to 21 per cent., while

* Holland is omitted from this table, though included in the tables annexed. The foreign trade of Holland is apparently very much of a transit or *quasi*-transit character, and for this reason the figures are not sufficiently comparable with those for the countries included in this table. It should also be remarked that, as far as regards exports, Dutch colonial produce is included under the head of domestic produce in Holland. The figures are retained *quantum valeant* in the tables in the Appendix.

† Not distinguished.

the United States' share has increased from 8 to 15 per cent., the value of the whole Japanese import trade being now about 26 million £ per annum. In the case of our colonies also, though we still retain the lion's share, Germany has made some trifling gains, while the United States have increased their share of the Australian and South African trades apparently at our expense. The same has to be said with regard to the United States and British shares of the trade of British North America, the British West Indies, and British Guiana. As regards European countries, Germany is, of course, considerably ahead of us in respect of the trade of neighbouring countries like Russia, Austria-Hungary, Denmark, and Switzerland. She is also ahead of us in respect of Roumanian trade, and runs us close in respect of trade with Sweden and Norway. On the other hand, we are ahead of Germany in the trade of Portugal, Spain, Italy, Greece, and Bulgaria, though the Portuguese, Greek, and Bulgarian trades are comparatively small in amount. A comparison of the figures contained in the above table will show that in respect of proportionate shares of the trade of each country, matters remain pretty much as they were in 1893–95, so far as the relative position of the United Kingdom and Germany are concerned, the only change of importance being in regard to Russian trade, in which our share has declined from 27 to 22 per cent., while the German share has advanced from 28 to 39 per cent. But such a comparison will also show that the United States have been gaining ground generally, though not to any large extent, so far as can be judged, at our expense, or at the expense of Germany. She has gained 5 per cent. in the Belgian trade, 4 per cent. in the Austro-Hungarian trade, and 3 per cent. in the Italian trade, besides 10 per cent. in the Danish trade. On the whole, however, it is manifest from the table, and the tables in the Appendix, that we still retain the preponderating position.

(*b*). *Imports into France, Germany, and United States from all Countries, from United Kingdom, and from one another.*

The following table gives particulars as to the imports into France, Germany, and the United States themselves :—

IMPORTS into FRANCE.

	Average of 1893–95.		Average of 1898–1900.	
	Millions.	Proportion of Total.	Millions.	Proportion of Total.
	£	Per cent.	£	Per cent.
From all countries - - -	152	—	183	—
From the United Kingdom - -	19	13	24	13
„ Germany - - -	12	8	15	8
„ United States - - - -	12	8	21	11

IMPORTS into GERMANY.

From all countries - - -	201	—	272	—
From the United Kingdom - -	27	13	33	12
„ France - - - -	11	6	15	5
„ United States - - - -	23	11	46	17

IMPORTS into the UNITED STATES.

From all countries - - -	156	—	150	—
From the United Kingdom - -	31	20	27	18
„ Germany - - -	17	11	17	12
„ France - - - -	13	8	13	9

This table is much to the same effect as the preceding one, showing as it does that, with one exception, the United Kingdom bulks larger than either of its competitors in the import trade of each country. It also shows, as does the preceding one, that the United States have been gaining ground in the European trade, and that it is not only to the United Kingdom that its exports have been expanding of late years. The exception just referred to, relates to the German import trade, in which, as will be seen, our share has slightly declined (by 1 per cent.) as between 1893–95 and 1898–1900, while that of the United States has increased by 6 per cent., with the result that the United States has now 17 per cent. of the German import trade, as against our 12 per cent. Of course the increased exports from the United States here, as elsewhere, are mainly made up of food-stuffs, but manufactured and partly manufactured goods have also counted for something. In the French trade the United States have increased their share by 3 per cent., while the United Kingdom and Germany simply hold their own. As to the import trade of the United States themselves, we have lost 2 per cent., while Germany and France have each gained 1 per cent., but small gains and losses like these are well within the range of mere ordinary fluctuations.

(c.) *Proportion of Imports into Neutral Markets from United Kingdom.*

The foregoing comparisons are interesting, but it is perhaps of special importance that we should examine the question of the increase or decrease of our trade in neutral markets as compared with the trade of our competitors over a longer period than that already dealt with. As regards our own trade we get a useful comparison in the following table, which is condensed from the tables in Section A. of the Appendix, and corresponding tables for 1884–85, 1890–92, and 1893–95 contained in former returns and reports :—

PROPORTION of Imports from the United Kingdom to Total Imports into the following Groups of Countries, in 1884–85, 1890–92, 1893–95, and 1898–1900.

NOTE.—This table takes no account of the imports of British goods into China or Japan from Hong Kong or the Straits Settlements.

* Excluding Austria-Hungary, in order that the figures may be comparative throughout. See Note (*l*), p. 31.

From this it unquestionably appears that the proportion of the business done by the United Kingdom has during the period under review diminished, the total volume of business, however, having very largely increased. The principal diminution in proportion is in the trade with Japan, and on analysis I have found that this diminution is largely due to the great increase which has taken place in the Japanese imports of rice, raw cotton, and sugar in recent years. To this extent the diminution in the proportion of our share of the trade with Japan is apparently of no great importance to our manufacturers.

(*d.*) *Proportion of Imports into Neutral Markets from France and United Kingdom compared.*

In the following tables I have endeavoured to show comparative results for France, Germany, and the United States in a similar form to those given above for the United Kingdom :—

PROPORTION of Imports from France to the Total Imports in the following Groups of Countries, compared with the Proportion of the Imports from the United Kingdom; and Total Imports of such Countries in 1884–85, 1890–92, 1893–95, and 1898–1900.

(g.) *Gains and Losses in Trade with Neutral Markets.*

The figures indicate a slight advance in the proportion of the imports of non-European countries from Germany in comparison with the proportion of the imports of those countries from the United Kingdom. The chief German gains between 1884–85 and 1898–1900 have been 1 per cent. in the American countries, 2 per cent. in British Possessions, and about 2½ per cent. in Egypt. Our proportion of the import trade of these countries has decreased, but, owing to the large increase in the trade itself, the decrease in proportion has been accompanied by increase in absolute amounts in all cases except that of the American countries. Our proportion, also, remains immensely superior to that of Germany in each instance. As regards the preponderating item in the statement, however, *viz.*, the import trade of European countries, Germany appears to have held its own while the United Kingdom has lost ground to the extent of 2 per cent. The result is that Germany has now a lead of 1 per cent. in the European import trade. The total amount of this trade on the average of 1898–1900 was 739 million £.

France shows a distinct, although a small, decline in the proportion of its contribution to the import trade of nearly all the countries mentioned. The only exception is in the case of British Possessions, and here the proportion of the French share of the trade is very small and remains stationary.

With regard to the United States it will be seen that the proportions have changed materially; that, speaking generally, the changes have occurred entirely within the most recent period; and that in all instances the changes have been in the direction of increase. The United States gains between 1884-85 and 1898–1900 have been 7 per cent. in European countries 1 per cent. in Egypt, 3 per cent. in the three American countries for which particulars are given, 5 per cent. in China, 6 per cent. in Japan, and 3 per cent. in British Possessions. As already seen, our own proportion of the import trade of all these countries (except the American, where we just hold our own) has diminished. It has to be remembered, however, that the exports of the United States consist mainly of breadstuffs, live and dead meat, and raw cotton, which of themselves accounted in 1899–1900 for 47 per cent. of the entire export trade of the States, a further 11 per cent. being accounted for by such articles as petroleum, tobacco, and timber. Moreover, beyond these articles it is manifest that the United States must possess natural advantages not possessed by ourselves or any other of our competitors in the production of cotton-seed oil, oilcake, and leather, which accounted for a still further 4 per cent. of the United States export trade in 1899–1900. As before pointed out, however, the growth of the export trade in so-called manufactured and partly manufactured goods from the States during recent years has been remarkable, and such goods have undoubtedly contributed to swell the United States export trade in almost every direction, and must consequently have influenced the growth of their proportionate share of the trade of the various countries. The natural conclusion from the figures, however, is that while the United States must continue to be in the main an agricultural country, exporting mainly agricultural products, for a very long time to come, she is becoming more and more a manufacturing country also, and more and more a dangerous competitor in the world's markets. A few years ago, when the previous Memorandum was prepared, it appeared that at that time we had only one country to consider as being in any way a serious industrial and trading adversary; now we have two, and it would seem as though the United States, in the course of time, with the natural advantages and rapidly increasing population she possesses, would be likely to become a still more dangerous commercial adversary than Germany herself.

Turning now from the proportions to the *amounts* of the trade we get the following summary table:—

INCREASE or Decrease between 1884–85 and 1898–1900 in the Amounts imported from the United Kingdom, Germany, France, and the United States respectively, by the various Groups of Countries, as above. (In thousands of £).

* Omitting the trade of Germany and the United Kingdom.
† Ditto, ditto, of France and the United Kingdom.
‡ Ditto, ditto, of the United States and the United Kingdom.
§ Not distinguished.
‖ Excluding Austria-Hungary. *See* note (*l*), p. 31.

I have to mention in quoting these figures, however, that the conversions from currency into sterling have, except in the cases of Japan and China, been made at nominal rates, a fact which affects the amounts for the silver-using countries considerably. This is especially the case in regard to India, but as the conversions for each country have been made on the same basis throughout, this qualification does not affect the percentage proportions which have been compared above.

Taking the amounts in the table as they stand the effect is to show that the United Kingdom increased its exports to the countries named between 1884–85 and 1898–1900 by £11,346,000 less than Germany, by £41,314,000 more than France, and by £61,283,000 less than the United States. But the great increase in the United States exports has been to European countries, and has been mainly of agricultural and food products and only to a small extent of products which compete with the export trade of the United Kingdom. The German increase, as we have seen, has also been almost wholly due to trade with adjoining European countries, but here the nature of the trade differs considerably from that of the United States trade. If, moreover, allowance be made for the effect upon the amounts stated in the table of the rate adopted for the conversion of the values of the import trade of India, the figures, as regards the comparison between the United Kingdom and Germany, will present a somewhat different aspect, as Germany will then appear to have gained very much more on the whole than the United Kingdom, the nominal gain of just over 11 million £ being turned into a real gain of 30 million £. In any case, however, the figures in the table show that we have not stood still. They show that we have progressed, although Germany and the United States have progressed more rapidly, but they do not show any displacement of the export trade of the United Kingdom in the period in question by any one of our three principal competitors.

The tables in the Appendix also give details respecting the exports from particular countries named to the United Kingdom as compared with their exports to France, Germany, and the United States respectively. Imports and exports are, of course, necessarily inter-connected. But in this Memorandum I am chiefly concerned with our export trade and the export trade of our competitors, and it may be sufficient to say that there is nothing in the figures of the exports from the rest of the world to France, Germany, and the United States respectively to call for special observation.

Reference may now be made to Table C, which compares in detail the imports into the United States from the United Kingdom and from France and Germany. Its object is to show the differing character of those imports. The United States is one of the most important neutral markets for European exporters, and it is interesting to note that there are groups of articles in its import trade in which one exporting nation or the other has a predominance, and that competition is not general throughout. On comparing the figures in detail with those given in former reports, it is evident that, although one of the special and most considerable of the gains of Germany in recent years as an exporter to the United States has been in regard to sugar (which the United Kingdom does not produce), her other gains have been important and that they are deserving of attention.

(x.) Principal Imports into United Kingdom from Germany.

Before summing up the conclusions to which the facts referred to in the foregoing pages seem to lead, I may, perhaps, call attention to Table G in the Appendix, which gives some details with regard to our "direct" imports from Germany. These details are interesting as bearing upon the question of the extent of the advance which Germany is alleged to have made in our home market in recent years. The table will be seen to bear out the observation previously made that there has been some decrease in our imports of agricultural produce from Germany, balanced by slight increases in cotton, woollen, and glass manufactures, and a heavy increase in sugar, the latter being the preponderating item in the whole statement. It also shows that there has been some increase in musical instruments and toys. The effect of the table, as it stands, is to show an average increase, as between 1880–84 and 1896–1900, amounting to £3,702,000, which is at the rate of nearly 15 per cent. But there are two facts which qualify this statement of increase materially. The first is that the figures for the earlier period include about £1,558,000 for the value of live animals (for food) imported, and the importation of live animals from German ports has been prohibited for some years in consequence of orders of the Board of Agriculture. The other is that an increase of no less than £3,349,000 is shown to have occurred in the value of our imports of sugar from Germany, and the case of sugar is, by reason of the German sugar bounties (which it is foreign to my present purpose to discuss), altogether exceptional. Further, the increase in the value of our imports of sugar from Germany would have been very much greater than recorded had it not been for a heavy reduction of price. If the two facts referred to be allowed for, by omitting the value of live animals from the total in 1880–84 and excluding sugar from the account altogether, it will be found that instead of an increase of £3,702,000 in the value of our "direct" imports from Germany there will be an apparent increase of about £1,911,000 only.

Looking at the details given in the table, the observation which at once occurs to me is that, although in several items there is a distinct advance in our imports from Germany, yet the whole amount of the trade, in some of the articles, is insignificant in comparison with our own home and export trades in those articles. As to cotton and woollen manufactures, we only took from Germany £678,000 worth of the former and £1,048,000 worth of the latter, on an average, in 1896–1900, while we exported in all over £58,000,000 worth of cottons, and £15,700,000 worth of woollen goods. Similarly with iron and steel manufactures (including machinery and cycles), of which we imported on an average in 1896–1900 £891,000 worth from Germany (included in "Other Articles, Unenumerated," in the table in the Appendix) but exported of our own manufacture £49,000,000 worth. The only other items in which important increases are noticeable in our "direct" imports from Germany are the following:—

Articles.	Total Value of Imports from Germany. (Average of 1896–1900.)	Increase over 1880–84.
	£	£
Caoutchouc manufactures	328,000	236,000
China and earthenware	301,000	198,000
Eggs	874,000	349,000
Glass manufactures	603,000	303,000
Musical instruments	683,000	435,000
Oilseed cake	384,000	371,000
Paper and pasteboard	544,000	180,000
Toys	617,000	451,000

Of caoutchouc manufactures we exported of our own produce, in 1896–1900 an annual average of £1,327,000 worth; of china and earthenware, £1,954,000 worth; and of paper and pasteboard, £1,532,000 worth. In effect, therefore, the classes of manufactured goods in which the competition of German goods would appear to be of most consequence in our home market are glasswares, musical instruments, paper, oilseed-cake, and toys. The list is not an extensive one, nor does it include any articles of first-class importance. The table in the Appendix is, however, deserving of careful study.

In continuation of the foregoing observations I may state that I have had the returns of our imports from Holland examined, in order to see what light they throw upon the somewhat obscure point of the increase or decrease of the imports from Germany which reach us through Dutch ports. The table at page 15 enables comparison to be made in regard to the increase of our imports from Germany and Holland taken together; but while it is evident that the returns relating to imports from Germany alone do not tell us the whole story of the progress of our trade with that country, the combination of the returns for Germany and Holland would involve the introduction of an element foreign to the purposes of this Memorandum, *viz.*, the increase of the trade fairly ascribable to Holland itself. It is impossible, therefore, in the nature of things to make up anything like an exact account of the real, as distinguished from the apparent, progress of our imports from Germany. There are certain descriptions of goods, however, which appear in the returns as imports from Holland which it is matter of common knowledge that that country does not produce in any considerable quantity for export, and which it is only reasonable to suppose are really of German (perhaps even of Austrian, Swiss, or, in some cases, of Belgian) production. The particulars as to the average annual values of some of the more important of these articles which we received from Holland in 1880–84 and 1896–1900 are given below:—

Description of Articles.	Average Annual Value of Imports in 1880–84.	Average Annual Value of Imports in 1896–1900.	Increase or Decrease.

* Average of the three years 1882, 1883, and 1884.

In quoting these figures I wish to be distinctly understood to guard myself against conveying an impression that the whole of the increases shown are due to increased trade with Germany. But some of them, and possibly a large proportion, are due to this cause, though it is quite impossible to state definite figures in any one instance. The whole increase which the table shows to have occurred in the value of these imports from Holland is £2,724,000, and if one-half of this could be ascribed to increased trade with Germany—a pure assumption—a sum of about £1,362,000 would have to be added to the £3,702,000 stated on page 28 as being the increase in our "direct" imports from Germany. It may well be, therefore, that if this "indirect" trade could be accurately measured the increase apparent from a comparison of the figures of the "direct" trade only would be increased by at least 50 per cent. But whatever may be said in regard to the above figures, the fact of the existence of the "indirect" trade with Germany must not be left out of account.

(xi.) Conclusions.

Some of the main conclusions of this Memorandum may thus be summarised:

The increase of population in Germany and the United States has recently been greater than the increase in the United Kingdom, and those countries have rapidly developed manufacturing and industrial power. As with ourselves, so with those countries, the set of population has been to the towns: necessarily therefore there has been a more vigorous search than formerly for an outlet for the power above referred to. We are still ahead of either country in our power of manufacture for export, but beginning from a lower level, each country is travelling upwards more rapidly than we are who occupy a higher eminence. If peace is maintained both Germany and the United States are certain to increase their rate of upward movement. Their competition with us in neutral markets, and even in our home markets, will probably, unless we ourselves are active, become increasingly serious. Every year will add to their acquired capital and skill, and they will have larger and larger additions to their population to draw upon. It is necessary, therefore, more than ever, that the change of conditions should be recognised, and we can scarcely expect to maintain our past undoubted pre-eminence, at any rate without strenuous effort and careful and energetic improvement in method. The problem how best this can be done is of vital interest to all classes of the industrial and commercial community alike though the assistance which the State can give in the matter must necessarily be of a limited character.

A. E. BATEMAN.

Commercial Department,
Board of Trade,
May 1902.

APPENDIX.

TABLE A.

I.—Average Value of Imports into the under-mentioned Countries from the United Kingdom in the Years stated.

(From the Returns of the several Countries.)

Countries.	Average Value of Imports in 1898–99–1900. From United Kingdom.	Average Value of Imports in 1898–99–1900. From all Countries.	Percentage of Imports from United Kingdom.	Increase (+) or Decrease (−) in Imports from United Kingdom between 1884–85 and 1898–99–1900. Amount.	Increase (+) or Decrease (−) in Imports from United Kingdom between 1884–85 and 1898–99–1900. Per Cent.	Increase (+) or Decrease (−) in Total Imports between 1884–85 and 1898–99–1900. Amount.	Increase (+) or Decrease (−) in Total Imports between 1884–85 and 1898–99–1900. Per Cent.

ALTERATIONS.

The Tables showing the Total Values of Imports and Exports at each Port are now brought together into one Table, by means of which the Total Value of the Trade at each Port is shown.

Tables of the Quantities and Values of the Principal and Other Articles imported and exported at **each** Port during each of the last five years have been substituted for the Tables giving similar information for **certain** Ports for one year only.

Tables relating to the Imports and Exports of Foreign and Colonial Merchandise Free of Duty in Transit on Through Bills of Lading are now shown.

NOTE.

The value of Exported Coal, etc., includes the duty.

VOL. II.

(c) Principal Articles at each Port	23	596

STATISTICAL OFFICE,
CUSTOM HOUSE,
LONDON.

A J WOOD,
Principal.

June, 1902.

NOTE.

In the tables contained in these Accounts, Imports are generally classified as received from the countries whence they were shipped direct to the United Kingdom. In the great majority of cases the country of shipment is also the country of origin; but it should be borne in mind that this is not always the case, and that to a greater or smaller extent merchandise, originating in one country, is credited in the tables to other countries at whose ports it has been transhipped, or through whose territories it has been conveyed by rail for shipment to the United Kingdom.

In particular cases in which this mode of classifying imports appears likely to give a seriously misleading idea of the real course of trade, efforts are made by the Customs Department, so far as possible, to attribute such imports to the actual countries of first shipment. It is not, however, possible to do this in all cases in the absence of "certificates of origin" of imported goods.

How far it has been found practicable in each instance to make the necessary adjustments in the returns will be seen from the following examples of the more important cases in which difficulty arises.

1. Countries such as Switzerland and Bolivia which have no seaboard do not figure in the returns at all. It has been found impracticable to distinguish Merchandise imported from these States, and such Merchandise is therefore credited to the country containing the port of shipment.

2. Large quantities of goods from Japan, China, and other Eastern Countries, are transhipped at Colombo. Other Eastern goods are transhipped at Marseilles. Goods from Chile and Peru are largely transhipped at Colon on the isthmus of Panama. In all these cases the goods are, so far as possible, credited to the country of original shipment instead of to Ceylon, France, or the Republic of Colombia, as the case may be.

3. A considerable amount of Canadian produce finds its way to the United Kingdom viâ the ports of the United States in winter, when many Canadian ports are closed by ice. To a limited extent produce from the United States is sent to the United Kingdom viâ Canadian ports, in the summer. Where, in such cases, the official documents enable a distinction to be drawn between Canadian and United States produce it is credited to the true country of origin. But, in many cases, such a distinction cannot be made, so that in using the statistics it should be remembered that a certain amount of the trade of Canada with this country, especially in winter, is unavoidably included under the heading "United States."

4. A considerable amount of the produce of Germany, Austria, and Switzerland finds its way to this country viâ Belgium and Holland. Some Russian produce comes through Germany, and a considerable quantity of Italian produce through Germany, Holland, Belgium, and France. Much West Indian produce is imported after transhipment at United States ports. In none of these cases has any correction of the returns been found possible, and the whole of the produce is credited to the country containing the port of shipment.

Exports are, as a rule, credited in the tables to the country of ultimate destination as declared by the exporters in their entries. Exports, however, to Switzerland and Bolivia, which possess no seaboard, are credited to the country in which the port of discharge is situated.
